Response to Arguments

Applicant's arguments filed 2/21/07 have been fully considered but they are not persuasive. The rejection addressing claim 13-21 and 21 is maintained. The specification does not define a "computer-readable storage medium," but it does define a "computer-readable medium."

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 13-21 and 29 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. Are rejected because medium as define in the specification includes signal, which is non-statutory. For clarification please see MPEP 2106.01.

Allowable Subject Matter

Claims 1-9 and 25-28 allowed.

The following is a statement of reasons for the indication of allowable subject matter:

The present invention differs the prior art of record in that applicant's invention rotates full and empty buffers for a plurality of web site domains, as changes the number as need for the be domains. Additionally applicant further clarified the interpretation of the claim in applicant pre-appeal request 7/24/06. In which applicant made the further distinctions over the prior art of record clear. Additionally since applicant has limited the invention to only website domain applicant prior art in related memory system were not obvious as prior art and could not be used in combination.
